

School of Mechanical Engineering (SME)

Faculty of Engineering

Bachelor of Engineering (Mechanical-Automotive)

ADMINISTRATION TEAM

Position	Name
Chair	Professor Dr. Mohd Hasbullah Idris hasbullah@utm.my 07-5534567
Associate Chair (Academic and Student Development)	Professor Dr. Izman Sudin izman@utm.my 07-5557051
Associate Chair (Research and Academic Staff)	Assoc. Prof. Ir. Dr. Zaini Ahmad azaini@utm.my 07-5557048
Associate Chair (Quality and Strategy)	Assoc. Prof. Dr. Haslinda Mohamed Kamar haslinda@utm.my 07-5557062
Associate Chair (Continuous Education and TNE)	Dr. Engku Mohammad Nazim Engku Abu Bakar nazim@utm.my 07-5534861
Associate Chair (Facility)	Assoc. Prof. Dr. Mohamed Ruslan Abdullah ruslanabdullah@utm.my 07-5534833
Director (Applied Mechanics & Design)	Assoc. Prof. Dr. Mohd Yazid Yahya yazidyahya@utm.my 07-5557044
Director (Aeronautics, Automotive & Ocean Engineering)	Assoc. Prof. Ir. Dr. Pakharuddin Mohd Samin pakhar@utm.my 07-5557043
Director (Materials, Manufacturing & Industrial Engineering)	Assoc. Prof. Dr. Muhamad Azizi Mat Yajid azizi@utm.my 07-5557038
Director (Thermal Fluids)	Dr. Aminuddin Saat aminuddin@utm.my 07-5557036

**BACHELOR OF ENGINEERING (MECHANICAL – AUTOMOTIVE)
PROGRAMME SPECIFICATIONS**

1.	Programme Name	Bachelor of Engineering (Mechanical – Automotive)
2.	Final Award	Bachelor of Engineering (Mechanical – Automotive)
3.	Awarding Institution	Universiti Teknologi Malaysia
4.	Teaching Institution	Universiti Teknologi Malaysia
5.	Professional or Statutory Body of Accreditation	Engineering Accreditation Council (EAC)
6.	Language(s) of Instruction	Bahasa Melayu and English
7.	Mode of Study (Conventional, distance learning, etc.)	Conventional
8.	Mode of Operation (Franchise, self-govern, etc.)	Self-govern
9.	Study Scheme (Full Time / Part Time)	Full Time
10.	Study Duration	Minimum : 4 years Maximum : 6 years
	Type of Semester	No of Semesters
	Normal	8
	Short	1
		No of Weeks/Semester
		14
		8
11.	Entry Requirements	Matriculation/STPM/Diploma or equivalent
12.	Programme Objectives (PEO) <ul style="list-style-type: none"> (i) Demonstrate academic and technological excellence professionally and globally, particularly in areas related to mechanical and automotive engineering practices and contribute innovatively to the nation's wealth creation. (ii) Career advancement by achieving higher levels of responsibility, leadership and acquiring professional and advanced academic qualifications. (iii) Recognize and practice professional, ethical, environmental and societal responsibilities and value different global and cultural aspects of their work and society. (iv) Adapt and communicate effectively and be successful working with multi-disciplinary teams. 	

13. Programme Learning Outcomes (PO)		
(a) Technical Knowledge and Competencies		
Intended Learning Outcomes	Teaching and Learning Methods	Assessment
PO1		
Acquire and apply fundamental knowledge of mathematics, science and engineering principles to solve complex mechanical and Automotive engineering problems; Keywords: Engineering Knowledge	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
PO2		
Identify, formulate and analyse complex mechanical and Automotive engineering problems; Keywords: Problem Analysis	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
PO3		
Design solutions for complex mechanical and Automotive engineering problems that fulfil health, safety, societal, cultural and environmental needs; Keywords: Design/Development of Solutions	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.
PO4		
Investigate complex mechanical and Automotive engineering problems using research-based knowledge and methods to produce conclusive results; Keywords: Investigation	Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.	Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.

Intended Learning Outcomes	Teaching and Learning Methods	Assessment
PO5		
<p>Use modern engineering and information technology (IT) tools in complex mechanical and automotive engineering activities, with an understanding of limitations;</p> <p>Keywords: Modern Tools Usage</p>	<p>Lectures, tutorials, laboratory works, seminars, studio works, directed reading, final year projects and problem-based learning.</p>	<p>Examinations, laboratory reports, seminar presentations, problem-based exercises, individual and group project reports.</p>
(b) Generic Skills		
PO6		
<p>Apply complex professional mechanical and automotive engineering problems and practice related to societal, health, safety, legal and cultural issues with full responsibility and integrity</p> <p>Keywords: The Engineer and Society</p>	<p>Lectures, tutorials, seminars, group projects and industrial training.</p>	<p>Industrial training and group project reports.</p>
PO7		
<p>Identify the impact of complex mechanical and automotive engineering problems and solutions on sustainability and demonstrate the needs for sustainable development in societal and environmental Contexts</p> <p>Keywords: Environment and Sustainability</p>	<p>Tutorials, laboratory works, group assignments and projects, final year project presentations and problem-based learning.</p>	<p>Group reports, learning logs/diaries and oral presentations.</p>
PO8		
<p>Ability to apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice;</p> <p>Keywords: Ethics</p>	<p>Lectures, tutorials, seminars, group projects and industrial training.</p>	<p>Industrial training and group project reports.</p>

Intended Learning Outcomes	Teaching and Learning Methods	Assessment
PO9		
<p>Communicate effectively on complex mechanical and automotive engineering activities both orally and in writing;</p> <p>Keywords: Communication</p>	<p>Seminars, assignments and final year projects.</p>	<p>Report and theses.</p>
PO10		
<p>Work productively as an individual, and as a member or leader in a team that may involve multi-disciplinary settings;</p> <p>Keywords: Team Working</p>	<p>Lectures and project assignments.</p>	<p>Demonstrations, reports, tests, examinations and presentations.</p>
PO11		
<p>Undertake life-long learning and manage information including conducting literature study;</p> <p>Keywords: Life Long Learning</p>	<p>Lectures and project assignments.</p>	<p>Demonstrations, reports, tests, examinations and presentations.</p>
PO12		
<p>Demonstrate and apply knowledge on finance and management principles and acquire entrepreneurship skill;</p> <p>Keywords: Project Management, Finance & Entrepreneurship</p>	<p>Lectures and project assignments.</p>	<p>Demonstrations, reports, tests, examinations and presentations.</p>

14. Classification of Courses			
No.	Classification	Credit Hours	Percentage
i.	School core	96	68.6
ii.	Programme Core	18	12.9
iii.	Programme Electives	3	2.1
iv.	Compulsory University Courses	23	16.4
	Total	140	100
Classification of courses for engineering programme			
A	Engineering Courses	117	83.6
	Total credit hours for Part A	117	
B	Non-Engineering	23	16.4
	Total credit hours for Part B	23	
	Total credit hours for Part A and B	140	100
15.	Total Credit Hours to Graduate	140	

Award Requirements

To graduate, students must:

- Attain a total of not less than 140 credit hours with a minimum CGPA of 2.00.
- Has passed all specified courses.
- Has applied for graduation and has been approved by the University.
- Has completed all four (4) short courses and one (1) test in UTM Professional Skills Certificate Programme.
- Other condition as specified.

Entry Requirements

The minimum qualifications for candidates who intend to do a Bachelor of Engineering (Mechanical - Automotive) are as follows:

1. Minimum results based on **the Malaysian High School Certificate (STPM)** (results would be based on the general requirements as well as other conditions as the pre-requisites for the programme set by the university).

University General Requirements:

- i. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.
- ii. Passed the Malaysian High School Certificate (STPM) or its equivalent and obtained the following:
 - a) **Grade C (NGMP 2.00)** General Studies/General Paper, and
 - b) **Grade C (NGMP 2.00)** in two (2) other subjects
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.

Programme Specific Requirements

- i. Obtained a **CGPA of 2.80**; and Passed with a minimum **Grade B- (NGMP 2.67)** in two (2) of the following subjects:
 - a) Mathematics T / Further Mathematics
 - b) Physics or Chemistry
 - ii. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.
 - iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.
 - iv. Do not have any health problems that may affect their studies.
2. Minimum requirements for **Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation** (fulfil the general requirements set by the university as well as other conditions of the programme).

General University Requirements

- i. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.
- ii. Passed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation with a minimum **CGPA of 2.00** and passed all the core subjects.
- iii. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.

Programme Specific Requirements

- i. Obtained a **CGPA of 2.80**; and Passed with a **Grade B- (2.67)** in two (2) of the following subjects:
 - a) Mathematics / Engineering Mathematics
 - b) Physics / Engineering Physics or Chemistry / Engineering Chemistry
 - ii. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.
 - iv. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.
 - iv. Do not have any health problems that may affect their studies.
3. Minimum qualifications for students with **Certificates/Diplomas** (fulfil the general requirements set by the university as well as specific requirements of the programme).

General University Requirements

- i. Obtained a Diploma or equivalent qualification recognised by the Malaysian Government and approved by the Senate.

or
- ii. Passed STPM examination in 2016 or before and obtained at least:
 - a) **Grade C (NGMP 2.00)** General Studies/General Paper, and
 - b) **Grade C (NGMP 2.00)** in two (2) other subjects

or
- iii. Passed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation in 2017 or before and obtained minimum **CGPA of 2.00**.
- iv. Passed the Malaysian University English Test (MUET) with minimum result of **Band 1**.
- v. Passed Malaysian Certificate Examination (SPM) or its equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or a credit in Bahasa Melayu/Bahasa Malaysia, July Paper.

Programme Specific Requirements

- i. Obtained a Diploma in Mechanical Engineering from UTM or equivalent with minimum **CGPA of 2.75**.
- or

- ii. For those who obtained a **CGPA of less than 2.75** but have at least **two (2)** years working experience in related field are eligible to apply.

or

- iii. Meet the minimum entry requirements as required for STPM holders.

or

- iv. Meet the minimum entry requirements as required for those who have completed the Matriculation Certificates (KPM) / UM Science Foundation / UiTM Foundation.

- v. Passed with at least a **Grade C** in Mathematics and Physics in the SPM level or equivalent.

or

- vi. Obtained at least a **C Grade (2.00)** in any one of the Mathematic courses at Diploma level.

- v. Passed the Malaysian University English Test (MUET) with minimum result of **Band 2**.

- vii. Do not have any health problems that may affect their studies.

Note:

Candidates are required to submit the results transcript of all their examinations taken during their Diploma study (semester one until the final semester) to UTM. A copy of the diploma or a letter of completion of study will also have to be submitted together with their applications.

Year of entry and duration of study will be based on the credit exemptions approved by the UTM.

PROFESSIONAL SKILLS CERTIFICATE (PSC)

Students are required to enrol in certificate programmes offered by the Centres of Excellence in the University and the School of Professional and Continuing Education (SPACE) during the duration of their studies in UTM. The four (4) short courses and one test are as follows:

1. How to Get Yourself Employed (HTGYE)
2. ISO 9001: 2008 Quality Management System Requirement (ISO)
3. Occupational Safety and Health Awareness (OSHA)
4. How to Manage Your Personal Finance (HTMYPF)
5. Test of English Communication Skills for Graduating Students (TECS):
 - (i) TECS 1001 (Paper I – Oral Interaction)
 - (ii) TECS 1002 (Paper II - Writing)

MOBILITY PROGRAMME (OUTBOUND)

Universiti Teknologi Malaysia (UTM) is offering five (5) types of mobility programs which allow UTM Student to go abroad and join academic programs in universities, institutions or organizations in all over the world. The opportunities offered are as below:

1. Study Abroad / Student Exchange

Study Abroad/Student Exchange programme is a programme which allow student to spend one or two semesters at universities abroad and take courses in regular semester with credit transfer opportunity.

2. Research Internship Abroad

Research Internship is a program which allow student to join research study or internship under the supervision of an academic staff at universities or industries abroad from all over the world.

3. Global Outreach Programme (GOP)

GOP is a 7 to 14 days academic based program to experience various cultures in other countries. It includes immersion elements such as research & academic activities, social responsibility and cross cultural activities.

4. International Invitation Programme

Students participate in program organised by international institutions/ organisations with the following themes:

- (i) Seminar, Conference or Paper Presentation
- (ii) Cultural Exhibition and Conference
- (iii) Student Development Activity

5. Summer School Abroad

Summer School program is a program which is designed to provide educational opportunities in 4 to 8 weeks during summer holiday abroad. It is related to environment, local community, heritage and tradition.

Details and appropriate forms and procedures can be reached at **UTM International link:** <http://www.utm.my/international/outbound-mobility-programs/>

UKQE 3001	Extra Curricular Experiential Learning	0	0	3	1	Completed three extracurricular experience programmes
Total					17	

Subject to changes:

* Core Courses – minimum passing grade is C (50%)

University general course for international student only, international students are not required to take UICI 1012 (semester 1) and UHAS 1172 (semester 2).

** Minimum grade D- (30%) in the pre-requisite courses

Obtained minimum of 80 credits

Notes: L – Lecture, T – Tutorial, P/S – Practical/Studio

ELECTIVE COURSES

Choose one (1) from the elective courses:

1. SEMV 4123 Vehicle Structure
2. SKMV 4413 Engine Turbocharging
3. SEMV 4423 Vehicle Powertrain

GRADUATION CHECKLIST

To graduate, students must pass all the stated courses in this checklist. It is the responsibility of the students to ensure that all courses are taken and passed. Students who do not complete any of the course are not allowed to graduate.

COURSE SYNOPSIS FOR B. ENG (MECHANICAL – AUTOMOTIVE)

SEMM 1013 Programming for Engineers

This course formally introduces the concept of computers, algorithms, programming languages, pseudo-code, and design of programs for solution to computational engineering problems. The two programming languages introduced in this course are C and MATLAB. Topics covered in this course include data types, constants, variables, arithmetic operations, assignment statement, looping, formatted I/O, functions, arrays, matrix operations, data structures, plotting and model building.

SEMM 1113 Mechanics of Solids I

The course provides students with the knowledge to determine the strength and stiffness of engineering structures being used. The structures that will be used in this course are bars, pins, bolts, shafts and beams and the types of applied loadings are axial forces, deformations due to the change in temperature, torsional loads, transverse loads and combination of these loads. At the end of the course, students should be able to determine the mechanical properties of the materials with respect to their strength and stiffness. Students should be able to calculate stresses, strains and deformations in structures due to various types of loading conditions. In addition, they should be able to solve problems related to statically determinate and indeterminate structures.

SEMM 1203 Statics

This course introduces students to the part of mechanics which is a pre-requisite for most engineering courses including SEMM 1213, SEMM 2313 and SEMM 1113. The course enables student to acquire the essential basic knowledge of resultant and equilibrium of forces. It will examine key elements in producing free body diagrams for particles and rigid bodies, as essential first step in solving applied mechanics problems. Exposure to the concept of moment and equilibrium equations with reference of Newton's Law enhances the relevance of friction, trusses, frames and machines applications. Students are also introduced to the concept of distributed forces, which include centroid and centre of gravity and the generated surface area and volume of revolution. Hence, students will be able to demonstrate and apply the knowledge in continuing subjects which requires the analytical skills developed in this subject.

SEMM 1213 Dynamics

The course is an extension to SEMM 1203, which is the pre-requisite to this course. It introduces students to the part of mechanics which considers the action of forces in producing motion. This course provides an exposure to students on the theory of the kinetics and kinematics of particles and rigid bodies. The concepts of energy, work, momentum and impulse are also introduced. At the end of the course students should be able to apply the principles to study and analyse the behaviour and responses of dynamical systems. They should also be able to solve the dynamic problems related to the determination of forces energy and power to move a body.

SEMM 1503 Engineering Drawing

This subject introduces student to the use of technical drawing in an effective way for communicating and integrating with engineering concepts. Such environment will provide a platform where the engineer can share and exchange information. This subject will also enlighten the student on the significant changes in the engineering and technical graphic due to the use of computer and CAD (Computer Aided Design) software. At the end of the course, student should be able to apply the skill and knowledge of engineering drawing to interpret design, using graphics method such as geometric drawing, orthographic projection, isometric, machine drawing, detailed drawing, and basic CAD software.

SEMM 1513 Introduction to Design

This course is designed to introduce students to the concepts and methods of engineering design process in solving engineering design problems, creatively and effectively. The design process introduces problem background, concept generations and selections, development of selected concept and testing of selected concept by constructing and testing a prototype. This course serves as a preparation for students to proceed to higher level design classes.

SEMM 1911 Experimental Methods

This course is conducted via lectures and experimental case study data. Students are exposed to the experimental method theory for the initial weeks and then followed by case study data. The lecture contents shall cover the fundamental of experimental method and the basic principles in measurements, instrumentation and analysis of results. It shall focus on the design of mechanical experiments, selection of sensors and transducers, estimation of errors and display of results. It shall also cover the analysis of results and how to prepare proper report writing. Student comprehension will be tested in two written tests. Based on the given experimental data, students are also expected to conduct statistical analysis of results and write the experimental outcome in a report.

SEMM 1921 Introduction to Mechanical Engineering

This course comprises of two modules intended to introduce students to the field of mechanical engineering. The first module raises the student's awareness to the importance and necessity of developing habits of systematic analysis in solving engineering problems. It introduces the UTM graduate attributes and highlights the importance of generic skills to engineers. It also provides students with a clear overview of different fields within Mechanical Engineering and a description of the mechanical engineer's work and professional responsibilities. It discusses the education requirements for today's mechanical engineers as well as exposes the students to the skill required for an engineer entrepreneur. This course introduces students to the field of mechanical engineering. It raises the student's awareness to the importance and necessity of developing habits of systematic analysis in solving engineering problems. It introduces the UTM graduate attributes and highlights the importance of both technical and generic skills to mechanical engineers. It also provides students with a clear overview of different fields within mechanical engineering and a description of the mechanical engineer's work and professional responsibilities. It discusses the education requirements for today's mechanical engineers as well as exposes the students to the skills required for an

engineering entrepreneur.

SEMM 2123 Mechanics of Solids II

The course is an extension to SEMM 1113, which is the pre-requisite to this course. It aims to extend the student's knowledge and understanding of the behaviour of materials and structures under a variety of loading conditions. The course starts off with plane stress and plane strain transformation, following which several elastic failure criteria's are investigated. The course provides an opportunity to investigate thick cylinders, structural deformation behaviour by using the energy method, instability problems of struts and elasto-plastic bending of beams. Determinate and indeterminate problems will be examined. At the end of the course, students should be able to calculate and evaluate stress, strain and deformation of structures in torsion and bending. They should also be able to evaluate failure modes and estimate fracture life of structures and components. The aspect of designing safe components and structures shall also be emphasized to the students.

SEMM 2223 Mechanics of Machines and Vibration

The course requires SEMM 1213 as the pre-requisite. It is designed to expose students to the application of concepts in mechanics (statics and dynamics) to solve real world mechanical engineering problems pertaining to various machines which include belt and pulley systems, gears, flywheels, governors and gyroscopes. Students will also be exposed to the methods of balancing rotating masses and parts of a combustion engine. The concept of vibration with respect to one-degree-freedom is also studied. At the end of the course, the students should be able to solve problems related to various mechanical systems. In addition, they should be able to evaluate analytically the parameters of components of various machines under study.

SEMM 2313 Mechanics of Fluids I

The principle aim of this course is to provide students with an understanding of the properties of fluids and to introduce fundamental laws and description of fluid behaviour and flow. It will emphasize on the concept of pressure, hydrostatic pressure equation and its application in the measurement of pressure, static force due to immersed surfaces, floatation and buoyancy analysis. Dynamic flow analysis inclusive of technique in solving flow problems is introduced especially to solve flow measurement, mass or volumetric flow rate, momentum in flow and loss in pipe network. Lastly, some basic dimensional analysis and similarities will be introduced. At the end of the course, the student should be able to demonstrate an ability to analyze whether statically, dynamically or kinematically problems related directly to fluids.

SEMM 2323 Mechanics of Fluids II

This course is designed to enhance the basic knowledge that has been developed in the first stage of Fluid Mechanics and expose the students in analysing hydrodynamically the flow field. It will emphasize on the analysis and the importance of ideal, boundary layer, and compressible flow in a practical engineering applications. The course will also provide the analysis of flow through fluid machines such as pump and turbine. At the end of the course, students should be able to demonstrate and apply the theory to solve problem related to flow of fluids.

SEMM 2413 Thermodynamics

Thermodynamics is a basic science that deals with energy. This course introduces students to the basic principles of thermodynamics. It will discuss basic concepts and introduces the various forms of energy and energy transfer as well as properties of pure substances. A general relation for the conservation of energy principle expressed in the First Law of Thermodynamics will be developed and applied to closed systems and extended to open systems. The second law of thermodynamics will be introduced and applied to cycles, cyclic devices and processes.

SEMM 2433 Applied Thermodynamics & Heat Transfer

This course aims to develop a fundamental understanding of the processes by which heat and energy are inter-related and converted and by which heat is transferred. The course will review major principles of energy conversion and the modes of heat transfer. The basic laws of thermodynamics and the governing equations for heat transfer and thermodynamics will be introduced and subsequently used to solve practical engineering problems involving thermodynamics and heat transfer. The course will also cover fundamental principles of power generation systems.

SEMM 2613 Materials Science

This course introduces students to the fundamentals of materials science and engineering with emphasis on atomic bonding, crystal structures and defects in metals. It will introduce students to the various classes of materials including metals, ceramics, polymers and composites and their fundamental structures. The course will also provide basic diffusion mechanisms, metal solidification phase diagrams and heat treatment processes. At the end of the course, students should be able to apply the knowledge of atomic bonding and crystal structures to predict the physical and mechanical behaviour of materials, and use the principles of phase diagrams and heat treatments to the design of materials and their properties.

SEMM 2713 Manufacturing Processes

This course discusses the fundamental aspect of various traditional and non-traditional manufacturing processes for metal and non-metal components. It starts from the overall introduction on manufacturing aspects followed by polymer shaping processes, casting processes, joining processes, metal forming processes and machining processes including CNC and CAM. At the end of this course, the students should be able to select suitable manufacturing processes to produce a part/product. The knowledge gained from this course also allows students to make right decision in designing products based on process requirements.

SEMM 2921 Laboratory I

This course is introduced in the second year of the Mechanical Engineering programme involving two hours per week session and experimental based courses. It consists of six laboratories; Strengths of Materials Laboratory, Materials Science Laboratory, Mechanics of Machines Laboratory, Electrical Laboratory and Fluid Laboratory. Students will be grouped into 5 to 6 people for each experiment. It is based on the theory that have been learned in the particular courses at the same semester. In general, every student has to carry out a total of twelve experiments. At the end of the session, students have to submit a report for each experiment and will be evaluated based on this report.

SEMM 3023 Applied Numerical Methods

This course formally introduces the steps involved in engineering analysis (mathematical modelling, solving the governing equation, and interpretation of the results). Examples of case studies in applied mechanics, strength of materials, thermal science, and fluid mechanics are presented. Methods for solving the nonlinear equations, simultaneous linear algebraic equations, eigenvalue problem, interpolation, numerical differentiation, numerical integration, initial value problems, boundary value problem and partial differential equation are introduced.

SEMM 3033 Finite Element Methods

This course gives students an exposure to the theoretical basis of the finite element method and its implementation principles, and introduces the use of general purpose finite element software for solving real-life engineering problems.

SEMM 3233 Control Engineering

The course shall cover the essential and basic theory of control engineering. It shall cover the followings: open and closed-loop systems, manipulation of block diagram, signal flow graph and *Mason's* rule, concept of transfer function, time response analysis, classification of system, control action, stability analysis, *Routh* criteria, root locus method, frequency analysis, *Nyquist* and *Bode* plots, relative stability from *Nyquist* and *Bode* diagrams and design of control system. MATLAB and Simulink software package shall be taught and used as a tool in solving control engineering problems where appropriate.

SEMM 3523 Components Design

This course is designed to expose students in analysing machine design element failure theories. This includes failure due to static and fatigue loads. It involves fatigue strength and endurance level, modified stress Goodman diagram and fatigue design under tensile and combined stresses. The content will encompass the design and selection of bolts, welding, spring, ball and roller bearing, gears and belts. At the end of the course, students should have the capabilities to identify, analyse and design the machine elements in the perspective of static and fatigue failure aspect.

SEMM 3622 Materials Technology

This course introduces students to the basic concepts required to understand and describe the mechanical behaviour and failure mechanism of metals. It will emphasise on the concept of stress intensity factor and fracture mechanics to predict failure of materials and provide understanding on conditions under which fatigue and creep occur. The course will also introduce students to the theory of electromechanical corrosion in metallic materials, estimate the corrosion rate and understand the methods to control and manage corrosion. By the end of the course, students should be able to apply the criteria of failure to the design of materials and conduct failure analysis of engineering components. This course also covers the properties, processing and applications of non-metallic materials mainly polymer, ceramic and composite.

SEMM 3813 Industrial Engineering

This course introduces students to various theories, principles and the importance in the area of industrial engineering and project management. It covers issues related to productivity, quality, work study, ergonomics, facilities planning and project scheduling. The contents give some brief exposure on the concept and application of overall discipline for an industrial engineer. Some calculations or measurements are introduced as an approach before deciding the best alternative. Students should be able to describe fundamental aspects of project management and integrate knowledge in engineering and project management. In project management, students are exposed to several steps in developing project plan, managing risks, scheduling resources reducing project duration, and progress and performance measurement. At the end of the course, students should be able to apply various concept and tools in selecting the best alternative in terms of man, machine, materials, method and management and planning and monitoring engineering projects.

SEMM 3823 Engineering Management, Safety and Economics

This course aims to prepare students with basic management knowledge, safety and engineering economy. The management part will examine key issues in management and organization, past management and today, strategic management, organizational structure and design, human resource management, motivating employees and leadership. Major topics covered under safety are OSHA 1994, Factories and Machinery Act 1967, hazard identification, risk assessment and control, basic principles of accident prevention and occupational health. In engineering economy, students are exposed to engineering economic principles and methods of engineering economic analysis. At the end of the course, students should be able to describe fundamental aspects of management; integrate knowledge in engineering and management in making business decisions; apply the principles of hazard identification, risk assessment/control; plan,

design and implement an effective safety program; and also perform engineering economic analysis to solve problems and evaluate engineering investment/projects.

SEMM 3915 Industrial Training

Industrial training exposes students to the real work setting in various industries for 12 weeks. The students are placed in industries that best suit their area of studies. It is an experiential learning that requires the students to learn the process and able to apply their knowledge acquired in class in actual industrial setting. The knowledge acquired during practical training may be used later in final year classes as well as to equip them with sufficient knowledge for job interviews.

SEMM 3931 Laboratory II

This course is introduced in the third year of Mechanical Engineering programme involving two hours per week and experimental based courses. It consists of six laboratories; Strength of Materials Laboratory, Thermodynamics Laboratory, Materials Science Laboratory, Mechanics of Machines Laboratory, Electrical Laboratory and Fluids Laboratory. Students will be grouped into 5 to 6 for each experiment. It is based on the theory learned in the particular courses at the same semester. In total, every student have to carry out twelve experiments. At the end of the session, students have to submit a report for each experiment and will be evaluated based on this report.

SEMM 3941 Laboratory III

This course is introduced in the third year of the Mechanical Engineering programme involving two hours per week session and experimental based courses. It is divided into two parts; experimental work at System & Control and Vibration Laboratories and a problem- based-learning (PBL) laboratory (module) depending on the topics/labs facilitated by a lecturer. Students have to produce a short report for the experimental work similar to those in Laboratory I and II. The second part, i.e., the lab module is based on the PBL concept. Student have to plan and design their own experimental work right from the very beginning until the end of the module based on the topics given by the lecturer. Students will be grouped into 5 to 6 for each module. In general, every group has to conduct two experimental works and two modules. At the end of the session, students have to submit two short reports and two formal reports.

SEMV 3012 Automotive Technology

This course introduces students the fundamental knowledge of automotive areas including different modern automotive system and components such as engine, transmission, differential, clutches, brakes, steering and suspension. Students will be exposed the principle function and working mechanism of the system. The new technology associated with different systems will also be introduced to enable student to identify the advancement in the technology. Students will also have some hands-on work to be done in automotive laboratory which will give them exposure to work on real automotive components and systems.

SEMV 3413 Internal Combustion Engine

This course is intended to provide students an introduction, terminology, definition, and operating characteristics of internal combustion engines (ICE). It covers all topics needed for a basic engineering knowledge of the design, operation, analysis and performance of IC engines. Principles of all types of IC engines are covered including spark ignition (gasoline), compression ignition (diesels), four-stroke, and two-stroke engines. On top of that, students will be equipped with basic knowledge and understanding of engine heat transfer, frictions and lubrication. Moreover, an introduction on fuel-cell, hybrid and other alternative fuels are also covered.

SEMV 3512 Automotive Engineering Design I

In this problem-based learning course, students will have to undertake (in group) one

mechanical-automotive engineering design exercise which involves current trend in automotive technology. The main aim of this course is for the students to experience how to undertake real group design project which involves the latest automotive technology. Students will have to go through the process of applying various techniques and scientific principles (which they have learnt in this programme) in order to achieve their goals. Students will also be taught to be creative, brainstorm their ideas, discuss, design and analyze their developed design. Concurrently, students will also be given lectures related to mechanical engineering design process and engineering design method (technology-independent), based on relevant engineering design books.

SEMV 3941 Laboratory III

This course is introduced in the third year of the study of Mechanical Engineering, three hours per week and experimental based course. It is divided into two parts; experimental work at Mechanics of Machine Laboratory and problem-based-learning (PBL) based laboratory (module). Students have to produce a short report for the experimental work as same to experimental work at year 2. But for the module, it is based on PBL concept. Students have to plan and design their experimental work from beginning until the end based on the title and objective that have been given by the lecturer. Students will be grouped into 5 to 6 for each module. Generally, every group has to conduct two experimental works and two modules. At the end of the session, students have to submit two short reports and two formal reports.

SEMV 4212 Automotive Electronics and Instrumentation

This course gives students an exposure to electronic and instrumentation systems typically used in automotive vehicles. It covers the basics of transducers and their uses in automotive instrumentation systems. The interface between transducers and microcontrollers are also covered for automotive applications. Major electronic systems in automotive vehicles (e.g. starting and charging system, electric, hybrid and autonomous vehicle systems) are also introduced and discussed in the course.

SEMV 4213 Vehicle Dynamics

This course introduces students to the fundamentals of vehicle dynamics such as vehicle axis system, equation of motions, moments and products of inertia, body/chassis stiffness and vibrations. Students will be taught the knowledge to develop equation of motions of vehicle dynamics model and to analyze its performance in terms of ride, comfort & handling behavior.

SEMV4523 Automotive Engineering Design II

In this problem-based learning course, students need to develop and fabricate (in group) one mechanical-automotive engineering system which involves both mechanical and electronic system integrations, which its specifications had been determined in Automotive Engineering Design 1. The main aim of this course is for the students to experience how to deliver an automotive system project involving the latest automotive technology, which emphasizes more on detailed engineering analysis and system fabrication. Students will have to go through the process of applying various techniques and scientific principles (which they have learnt in prerequisite subjects) in order to achieve their goals. At the end of the semester, the students are required to produce one automotive system which comprises integration between both mechanical and electronics systems.

SEMV 4793 Automotive Production Technology

This course introduces students to the advances of manufacturing processes involved in the production of selected automotive parts. Further enhancement of basic manufacturing processes through analysis of selected critical parameters in stamping operation is also given. A brief overview on other processes such as joining, injection molding, thermoforming and etc. are highlighted. The course will also highlight some of the challenging issues such as Quality improvement implementation, Lean Manufacturing and

Automation.

ELECTIVE I

SEMV 4413 Engine Turbocharging

This course is designed to deliver the principles of engine boosting and the its significant role towards engine downsizing. The course will emphasize on the engine air induction system, in particular the turbocharging and supercharging systems. Students will be introduced to the science governing the operation of turbochargers and superchargers – which covers aerodynamics, gas dynamics and thermodynamics. The syllabus will enable the students to have the view of a turbocharger designer, as well as enable them to recognize the common problems relating to turbocharging an internal combustion engine. Engine downsizing is one of the crucial steps undertaken by engine manufacturers towards carbon reduction and sustainable technology. However, it requires significant technology advancement in all aspects of engine sub-systems, to deliver the targeted performance. The specific contributions of engine boosting to meet these targets will be discussed and elaborated as part of the course

ELECTIVE II

SEMV 4123 Vehicle Structure

This course is designed to expose students to the design of the modern passenger car structure. It will emphasize on the general architecture of the vehicle structure, design specifications for the body structure, methodology for evaluation of body structure performance.

SEMV 4423 Vehicle Powertrain

This course introduces students to the fundamental of vehicle powertrain engineering systems. Students will be lectured on vehicle powertrain system that employs manual and automatic transmissions that uses either dry friction clutch or hydraulic torque converter and how to predict its performances. Students will be taught on how to match engine (internal combustion engine – ICE) and the different types of transmission systems in predicting the vehicle performances. The performances predictions that will be covered in this course are how to determine vehicle gradeability, top speed, and acceleration and steady state fuel consumptions. In conjunction to these, students will be thought on how to determine top, bottom and intermediate gear ratios taking into consideration overgeering and undergeering conditions; and exploiting the current new continuously variable transmission (CVT) technology capability to achieve the above vehicle performances will be highlighted.
